

# Crimson Cover-All Mix

N-Vest<sup>®</sup> Crimson Cover-All Mixture consists of winterhardy Crimson Clover and cover crop radishes. This mix both produces and scavenges nitrogen.

## Benefits of Crimson Cover-All Mix:

- ◆ Produces Nitrogen
  - ◆ University tests in western Indiana showed winterhardy Crimson Clover produced over 140 pounds of N/acre.
- ◆ Scavenges Nitrogen
  - ◆ Tests have shown cover crop radishes have scavenged as much as 130 pounds of N/acre (tops and tubers combined—with manure applied).

Winterhardy Crimson Clover and cover crop radish make a tremendous cover crop mixture. Winterhardy Crimson Clover produced over 140 pounds on N in the field pictured above and to the left.

Cover crop radish tubers provide excellent nutrient scavenging and soil building characteristics.

### Planting tips:

Planting Rate: 17-20#/acre  
Planting Depth: 1/4—1/2" deep  
Planting Time: July to early September  
(plan on planting at least 6 weeks before killing frost)
