

# Forager Mix

N-Vest<sup>®</sup> *Forager Mix* is a combination of Oats, Winter Rye, and Hqtci g" Turnips. *Forager Mix* is an excellent choice for aerial application into standing row crops. The oats and turnips grow the fastest in the fall and the rye is available for grazing over the winter and spring.

Above: *Forager Mix* 8 weeks after aerial application.

## Benefits of *Forager Mix*:

- ◆ Provides excellent feed for cattle
  - Cattle gained 3.5#/day weight gain in Illinois tests on *Forager Mix*
- ◆ Produces deep roots
- ◆ Scavenges Nitrogen
- ◆ Yields in corn crops following *Forager Mix* have shown increased yields

### Planting tips:

Planting Rate: 105#/acre\*\*  
Planting Depth: 1/2"- 3/4" deep  
Aerial Seeding: Recommended  
Planting Time: July to early September  
(plan on planting at least 6 weeks before killing frost)

\*\*105#/acre is suggested to get maximum forage yield. If utilized for cover crops only, this rate can be reduced.

A Forager Mix test plot is pictured to the right.
