

NutriBuilder Mix

N-Vest[®] NutriBuilder Mix is a combination of winterhardy Annual Ryegrass, winterhardy Crimson Clover, and cover crop radishes. This mix both produces and scavenges nitrogen.

Benefits of NutriBuilder Mix:

◆ Produces Nitrogen

- ◆ A good stand of this mix should produce up to 60-100 pounds of N/acre.

◆ Scavenges Nitrogen

- ◆ Tests have shown cover crop radish have scavenged as much as 130 pounds of N/acre (tops and tubers combined—with manure applied). According to multi-State research, Annual Ryegrass can scavenge well over 300 pounds of N/acre.

Photos above and below shows what NutriBuilder looked like in the fall of 2010. This was planted following wheat.

This mix was impressive from emergence all of the way until we killed it in the spring. It continues to be impressive as the sweet corn planted where the NutriBuilder Mix was is the most impressive of the whole field! John Miller, Campbell Hill, IL

Each of the species in the NutriBuilder Mix have roots that provide an “earthworm heaven”! The photo to the right comes from a NutriBuilder plot.

Planting tips:

Planting Rate: 20-25#/acre
Planting Depth: 1/2”- 3/4” deep
Planting Time: July to early September
(plan on planting at least 6 weeks before killing frost)
